## Special Call for Proposals: Fast-Track innovative projects to counter the impacts of COVID-19:

# Healthlog

**Wednesday, 1st December 2021 @ 14:00 hrs**  
(45 mins + 15 mins Questions & Answers)

### **Synopsis:**

A cloud-based health record management platform for users to maintain a centralized medical diary, giving access to health institutions and practitioners to rapidly view the user's medical condition and history so as to formulate better diagnostics. Healthlog comes as a mobile application for the patient as well as a web interface for healthcare providers to feed clinical data.

Covid-19 is showing us how fragile our health can be. Keeping track of our health and facilitating relaying the information to healthcare professionals when required will definitely give us an edge on diseases.

Healthlog allows communicating your medical conditions in a timely and convenient manner. This is particularly important when seeking treatment. Some people have medical conditions or are under certain medications which require special attention. For example, Cardiac patients usually take Warfarin and this should be communicated every time they seek medical attention. With the app, they can just show their mobile health card for the medical practitioner to see the medical records of the user. With Covid19, in waiting for a cure, we should know the current conditions of our people, especially old age. Healthlog will be just that.

Health records can help users better manage their care. Having important health information – such as immunization records, lab results, and screening due dates but also allergies, prescribed medication and other health conditions – in electronic form makes it easy for patients to update and share their records.

The platform can also provide analytics for the healthcare sector and policy-makers.

### **Presentation**

**Speakers:** *Mr Nadarajen Moorogan, Director, Ogment Co Ltd*

**Team Members:** *Megna Ujuda, Nundjeet Rambarun, Liubomyr Slava*
